

frontrow™

Specialised **sound** pro distribution system

Classroom or meeting room

Sound field systems improve clarity of sound for school and or meeting rooms. Infrared or FM sound field systems produce a range of benefits for both students and teachers. Printacall specialise in the supply and installation of sound field amplification systems.

When choosing Printacall to advise you on sound field systems, audio induction loop systems for children with a hearing loss, text telephones (TTYs) or other assistive listening devices you are in good hands. With 24 years as a specialist technical/sales and service organisation our focus is always on the supply of quality equipment backed by technical expertise and excellent customer service.

When used in general or special education classrooms

Frontrow™ Pro:

- fosters a successful learning environment
- increases student attentiveness, participation, comprehension and literacy scores
- significantly reduces behaviour referrals
- reduces teacher absenteeism due to vocal fatigue

Key Features

- Robust and easy to operate
- Lightweight wireless pendant microphone offers superior comfort and sound quality
- Optional mic for team-teaching or student pass-around
- Integrates stereo sound seamlessly from other classroom audiovisual equipment

™ Trade mark of Phonic Ear Inc, USA.

Email: sales@printacall.com.au | Web: www.printacall.com.au

Actual system has 4 speakers, infrared sensors, emitter and microphone options (lavalier shown)

There are three models of Frontraw™ available:

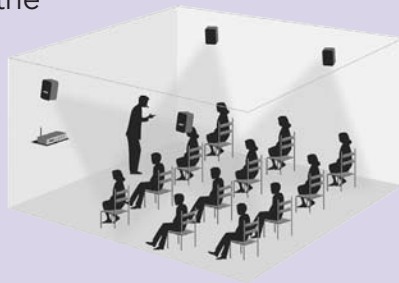

- **Pro** (wall mount, infrared)
- **Tempo** (wall mount, FM)
- **To Go** (portable, FM)

How systems will benefit your students and teachers:

- Improve the learning environment
- Engage students and improve attentiveness in the classroom
- Foster control and orderliness, increase on-task behaviour, boost comprehension
- Reduce vocal strain and fatigue for teachers
- Support students suffering from Otitis Media (middle ear infection) and Attention Deficit Disorders

How does it work?

A typical Frontraw™ Pro system consists of an infrared emitter and a lapel wireless microphone worn by the teacher and 4 speakers located around the 4 walls of the room which actually make the "Field" integrated with specially designed sensors. Amplifying the teacher's voice raises the signal to noise ratio which improves speech intelligibility and reduces vocal strain. An extra hand held microphone can be provided for students to pass around, so they can be amplified too.

Congratulations To The Schools: The 2007 Recipients of Lions Hearing Dogs' Funding

People with a hearing disability have been assisted in regaining their independence through the provision of Lions Hearing Dogs for many years. Now, they are generously assisting hearing impaired children in Primary schools throughout Australia. They have recently expanded their services to include provision of Phonic Ear Frontraw™ sound field systems to improve learning in schools within communities who otherwise could not afford it. The systems are also of benefit for children who suffer from one of the various Attention Deficit Disorders.

Schools that find themselves with children in need of assistance, but are not capable of raising the necessary funds to purchase a sound field system, can log onto the Lions Hearing Dogs' website www.hearingdogs.asn.au/legacy.html and submit an application.

The funds that allow Lions Hearing Dogs to offer this service to schools come from a legacy from the late Beth Klugh. Thanks to many volunteers, and donations from both individuals and organisations who sponsor their programs, they are able to provide an invaluable service to the hearing impaired members of our communities. They are to be commended for their continual efforts to serve the community but without our financial assistance this work could not continue. When you consider giving, think of this organisation.
